

# WHITEPAPER V2.1

ORYX

ORYX PROJECT

[4ORYX.COM](http://4ORYX.COM)

# INTRODUCTION

The oryx whitepaper is the official documentation of the oryx project, the whitepaper exhibits the technical specifications, unique characteristics, and objectives of the oryx network.

The white paper is a variable document that will continually alter and update as the project progresses and as more of the technology is developed to assist in the evolution of the oryx network and orx cryptocurrency.

The whitepaper and roadmap is a dynamic list of the aspirations of the project and the community.

The oryx project upholds an ambitious set of goals stated in the whitepaper, roadmap that can be applied and manageable.

The oryx team will maintain a roadmap that is malleable but also feasible in order to focus on the essential components of the project while leaving some wiggle room for necessary adaptations.

# WHO WE ARE ?

Oryx will operate as a multinational company with employees all over the globe as time goes on with all successful products we dish out to the public.

Our employees have many different backgrounds and skillsets which will benefit the company as it grows into varying fields of operations.

We are building the leading decentralized blockchain based marketplace, by enabling merchants to actively participate in every important decision, we empower them to be more than just customers of a platform.

# WHAT IS ORYX?

The oryx project is dedicated to building valuable dapps that solves real world and cryptocurrency issues. We are building unique decentralized apps that offers services from social media networking to payment portals.

These applications we are building, are all in one project of what the oryx project envisioned, our primary goal is to build useful e-commerce applications to help improve the use case of blockchain and also to aid in blockchain adoption.

All prototypes being built by the oryx team, are all powered by the oryx project, this is initiated in order to give real value and to improve its ecosystem.

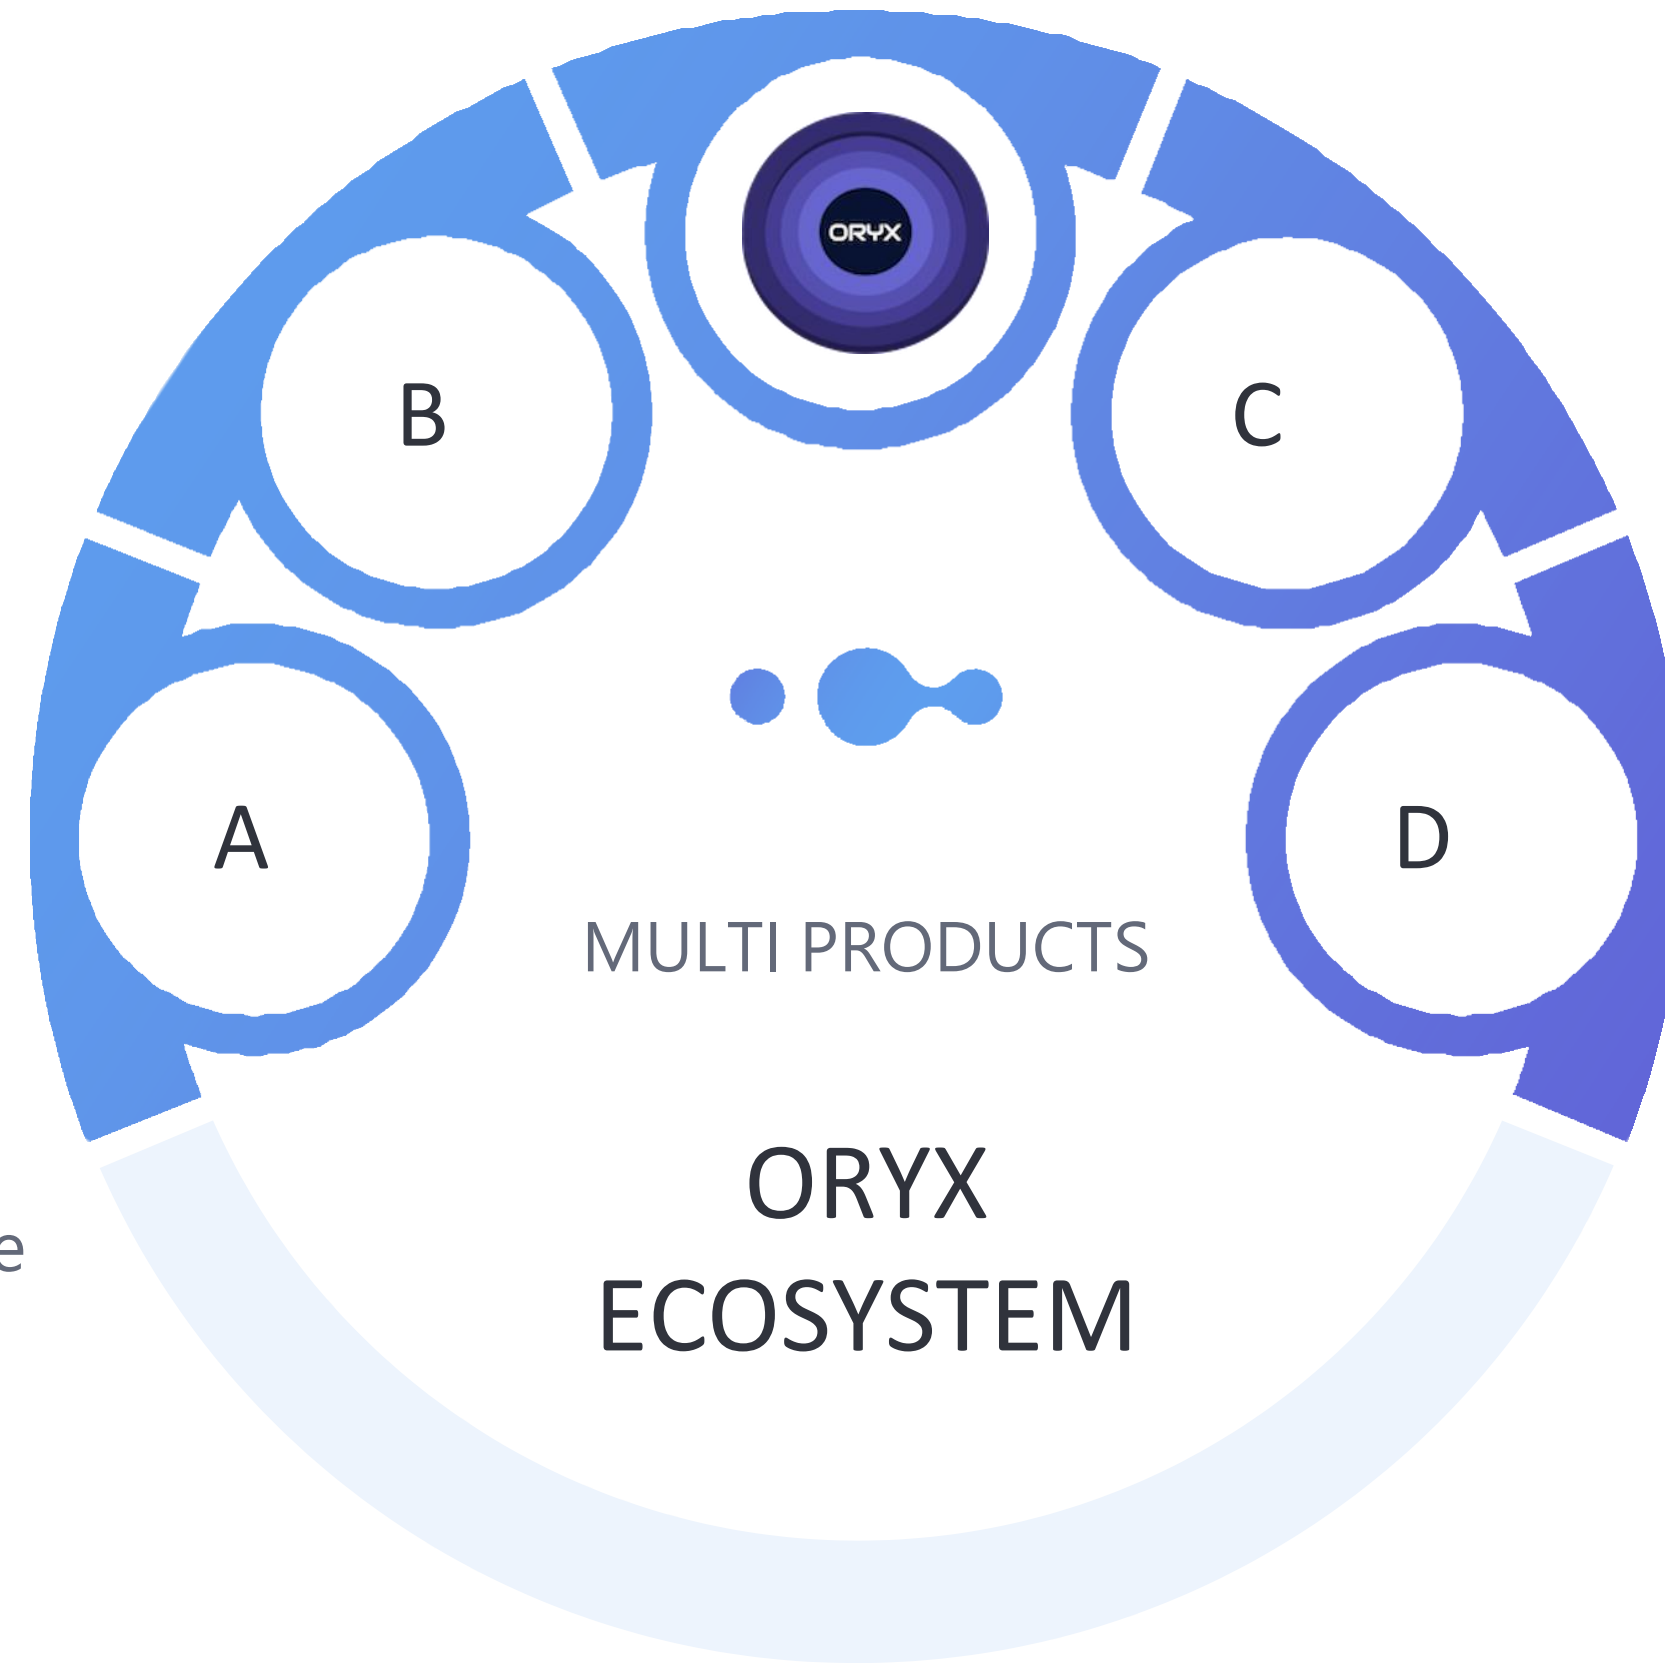

ORYX vision is to provide complete satisfaction for crypto enthusiasts to non crypto users in the real world by building useful platforms and integrating them to various e-commerce stores in which some of this platforms are given below, e-commerce, gaming platform, internet services and different crypto platforms.

## B. Crypto Platforms

Provide complete satisfaction for crypto enthusiasts to non crypto users in the real world by building useful platforms.

## A. Gaming Platforms

Gaming platforms with the secure and transparent decentralized ledger technology that powers cryptocurrencies.

## C. E-Commerce System

E-commerce platform with a blockchain that mainly focuses on everything related to e-commerce.

## D. Exchange System

Exchange crypto tokens, remove the liability and security hurdles associated with traditional central platforms.

## IN SHORT

Basically oryx was founded to build multi platform product with the aim to cover all needed for everyone and for crypto users.

The platform itself was connected each other, with the creation of multi platform, the economic model of oryx project will be running perfect and the utility of orx token itself will be very usefull.

# THE VISION

Oryx vision is to change how you see e-commerce in the form it is now by decentralizing e-commerce and setting an unprecedented future with blockchain, governed by smart contracts, and with no decision making entity other than the stakeholders, only the merchant alliance members (token holders) will define rules and regulations, and program them into smart contracts, guaranteeing transparency, trust and sustainability.

A functional portion of the proposed marketplace can be the objective to start building the future of e-commerce today, without a negative impact on performance or user experience, this can only be achieved by carefully analyzing all components of a decentralized marketplace and successfully migrating to a blockchain environment.

# THE PROBLEM

Centralized marketplaces are harming the e-commerce industry, major marketplaces are actually causing harm to the e-commerce industry. The current model for marketplaces involves overcharging buyers and unfairly treating sellers, centralized market leaders focus too much on making sure that their own sites grow, leading them to punish sellers by taking more money from them and forcing them to pay for services which they do not need, the problem is that these markets think they have no genuine competition.

At this point, The biggest centralized marketplaces are convinced that their actions will not negatively affect their stature. They can make arbitrary rules, they can charge extortionate rates, and they can change their platform with the click of their fingers. There are no checks and balances. While governments may step in at times to ensure that matters regarding taxation and employment law are being followed, there is nobody who steps in to make sure that the platforms themselves are actually fair to the consumer.

# THE SOLUTION

A decentralized platform pulls its strength from the fact that all members of its ecosystem are important. This means that many of the rules and guidelines regarding the sale of goods can be decided (or at least discussed) by actual users. Buyers and sellers would have the ability to consider the guidelines on the marketplaces because the marketplace would actually value them.

The impact that will be felt by users, members and countries of our project is to make it easier for all services needed by all crypto members and non crypto members, because we have several platforms that are very useful for all members, and it's all under the oryx project. Non crypto members will know more about crypto because of the platform that we serve.

Oryx has developed an intuitive all-in-one e-commerce solution. This open-source software has constantly been improved to solve our merchant's needs based on open-source software powered by blockchain technology, the best alternative is a decentralized, organized marketplace which in the future will be controlled by merchants themselves.

Decisions regarding features and services as well as cost and fee structures will not be forced upon merchants anymore, Merchants across the globe become members of this alliance and thus participate in the decision-making process, simply by owning and making decisions on the network, The success does not lie in accumulating wealth in the hands of only a few central institutions - but rather in working together for the benefit of everyone.

This becomes feasible if everybody is enabled to get involved in decision- making processes - like in a decentralized marketplace.

Decentralization in e-commerce will mean involving all the stakeholders in every major decision, creating a truly equal, sustainable and level playing field for everyone.

# COMPETITION

- ✓ **Cryptocurrency payment system**  
Global payment system with credit card supported in each country will be there as the country's official couriers for the reception and refund service.

- ✓ **Multi products**  
We are building unique decentralized apps that offers services from social media networking to payment portals

- ✓ **Cryptocurrency platforms**  
Provide complete satisfaction for Crypto enthusiasts to Non Crypto users in the real world by building useful platforms.

- ✓ **Buy back system**  
We will buy back ORX tokens that have been circulating from some of the business results that we have done,

# COMMUNITY PARTICIPATION

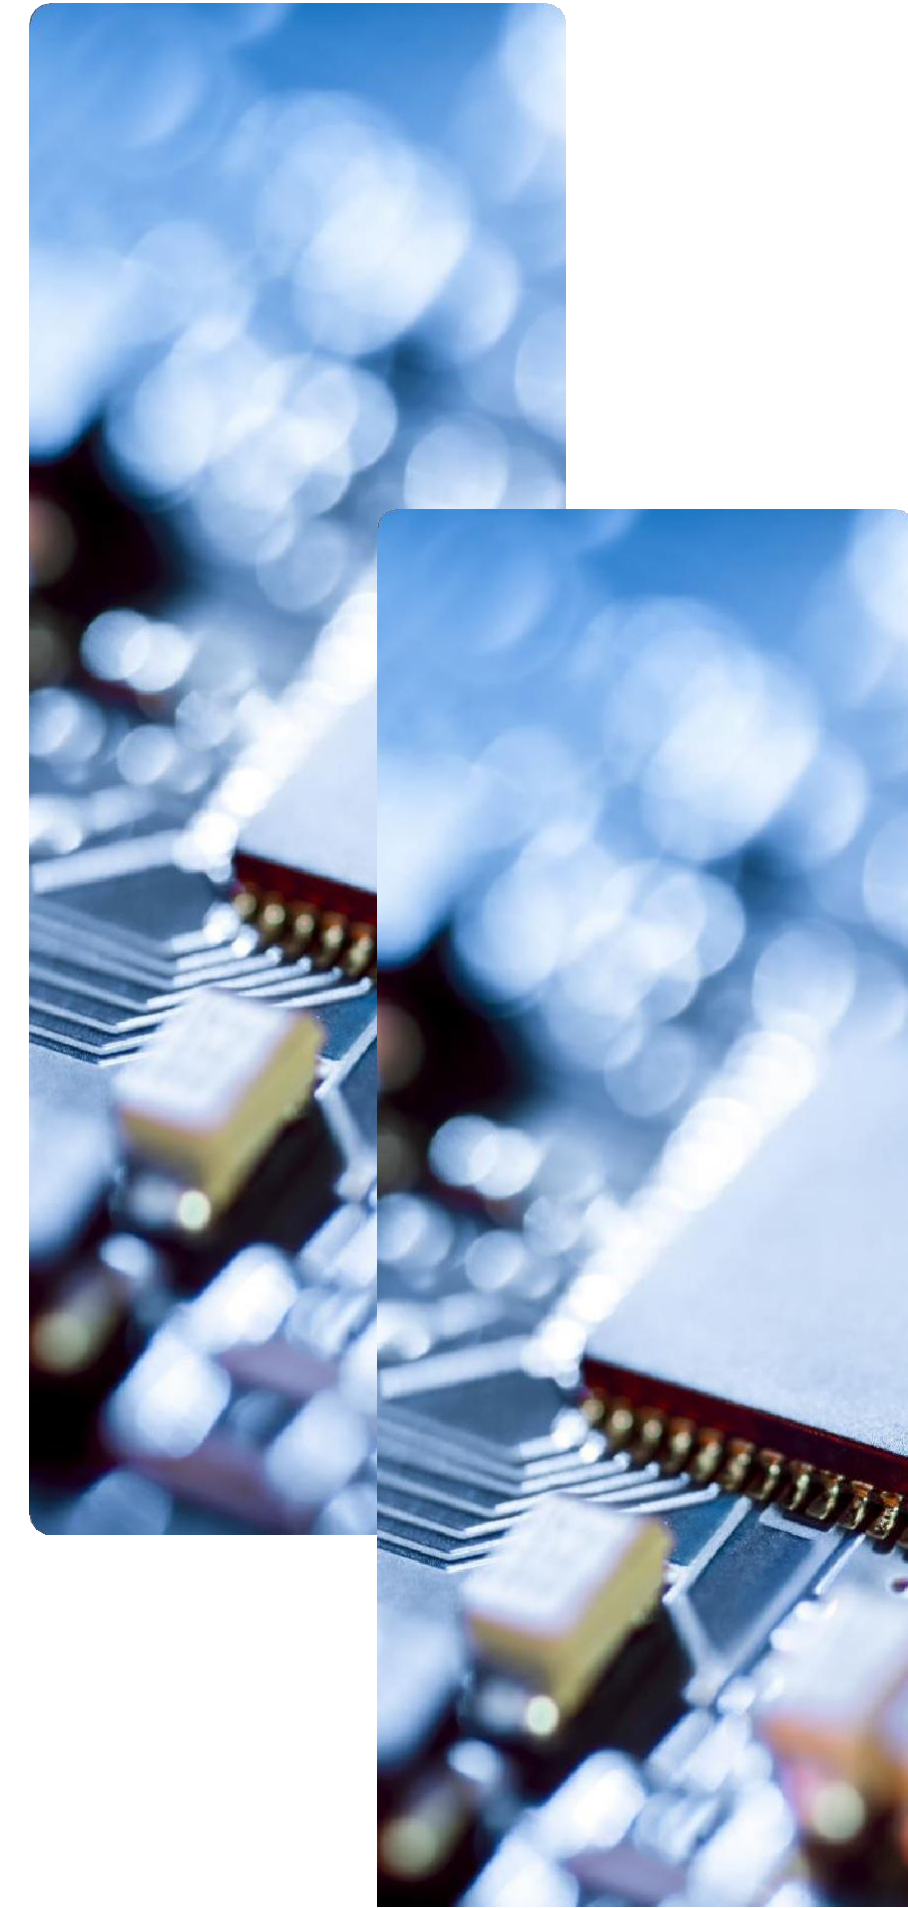

With our growing community, we thought of a way to reward the community and bring them under one umbrella of social services through Oryx, the Oryx project is decentralizing e-commerce and we need large community members to participate on the project for same purpose of growing rate when its main functions has been deployed and increasing the trust before we can attain some certain level, and because of that, we decided to build A Decentralized Social Network Platform( [Oyaaa Network](#) ) .

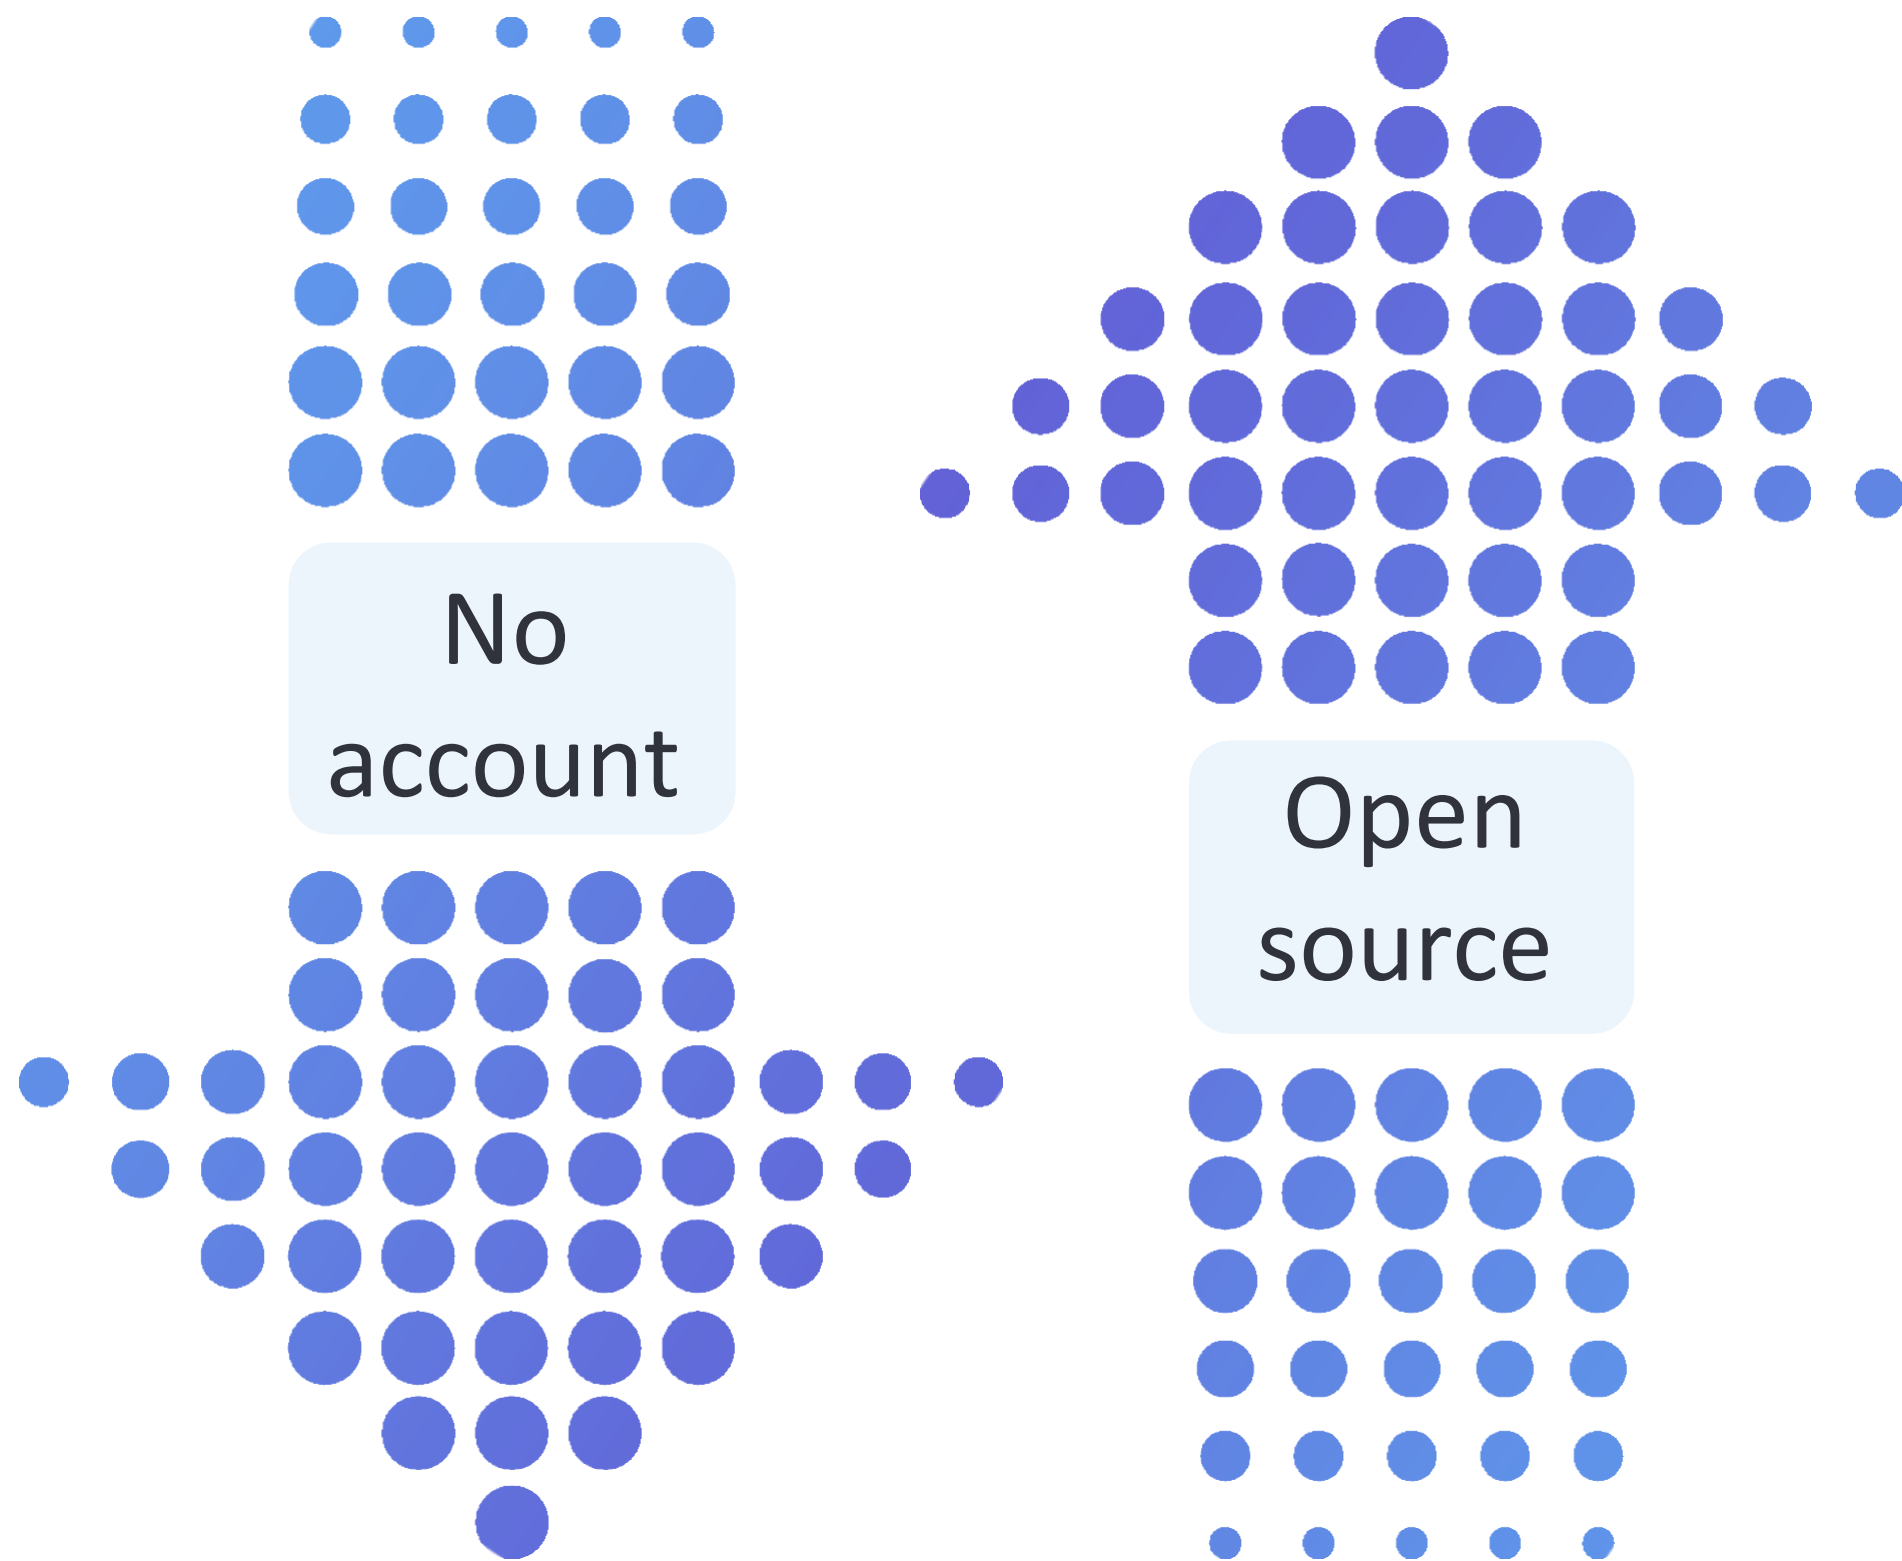

# PRIVACY COIN

We will build our own blockchain within 2 years of token launch. For the first 2 years we will perform as an ERC-20 token with the main priority of listing with high volume, quality exchanges. Long term goals include building and migrating to our own blockchain with high privacy and untraceable transactions, when that time approaches, we do need to revisit our whitepaper and emphasize more on our privacy coin, the swap plan will be 1:1 token to coin migration.

# DECENTRALIZED EXCHANGE

We will begin to build our decentralized exchange, which aims to provide a decentralized basis for currency holders to exchange crypto tokens and remove the liability and security hurdles associated with traditional central platforms once we've launch our mainnet come Q4 2020.

# OUR PRODUCTS

## 1 OYAAA

Oyaaa is a social media platform by combining the system of FB and Twitter, and also many crypto touches in it.

## 2 HIRINGBLOCKS

Hiringblocks was made to facilitate a member who is seeking a job, and to facilitate some projects or some companies that open their vacancy to recruit new employee.

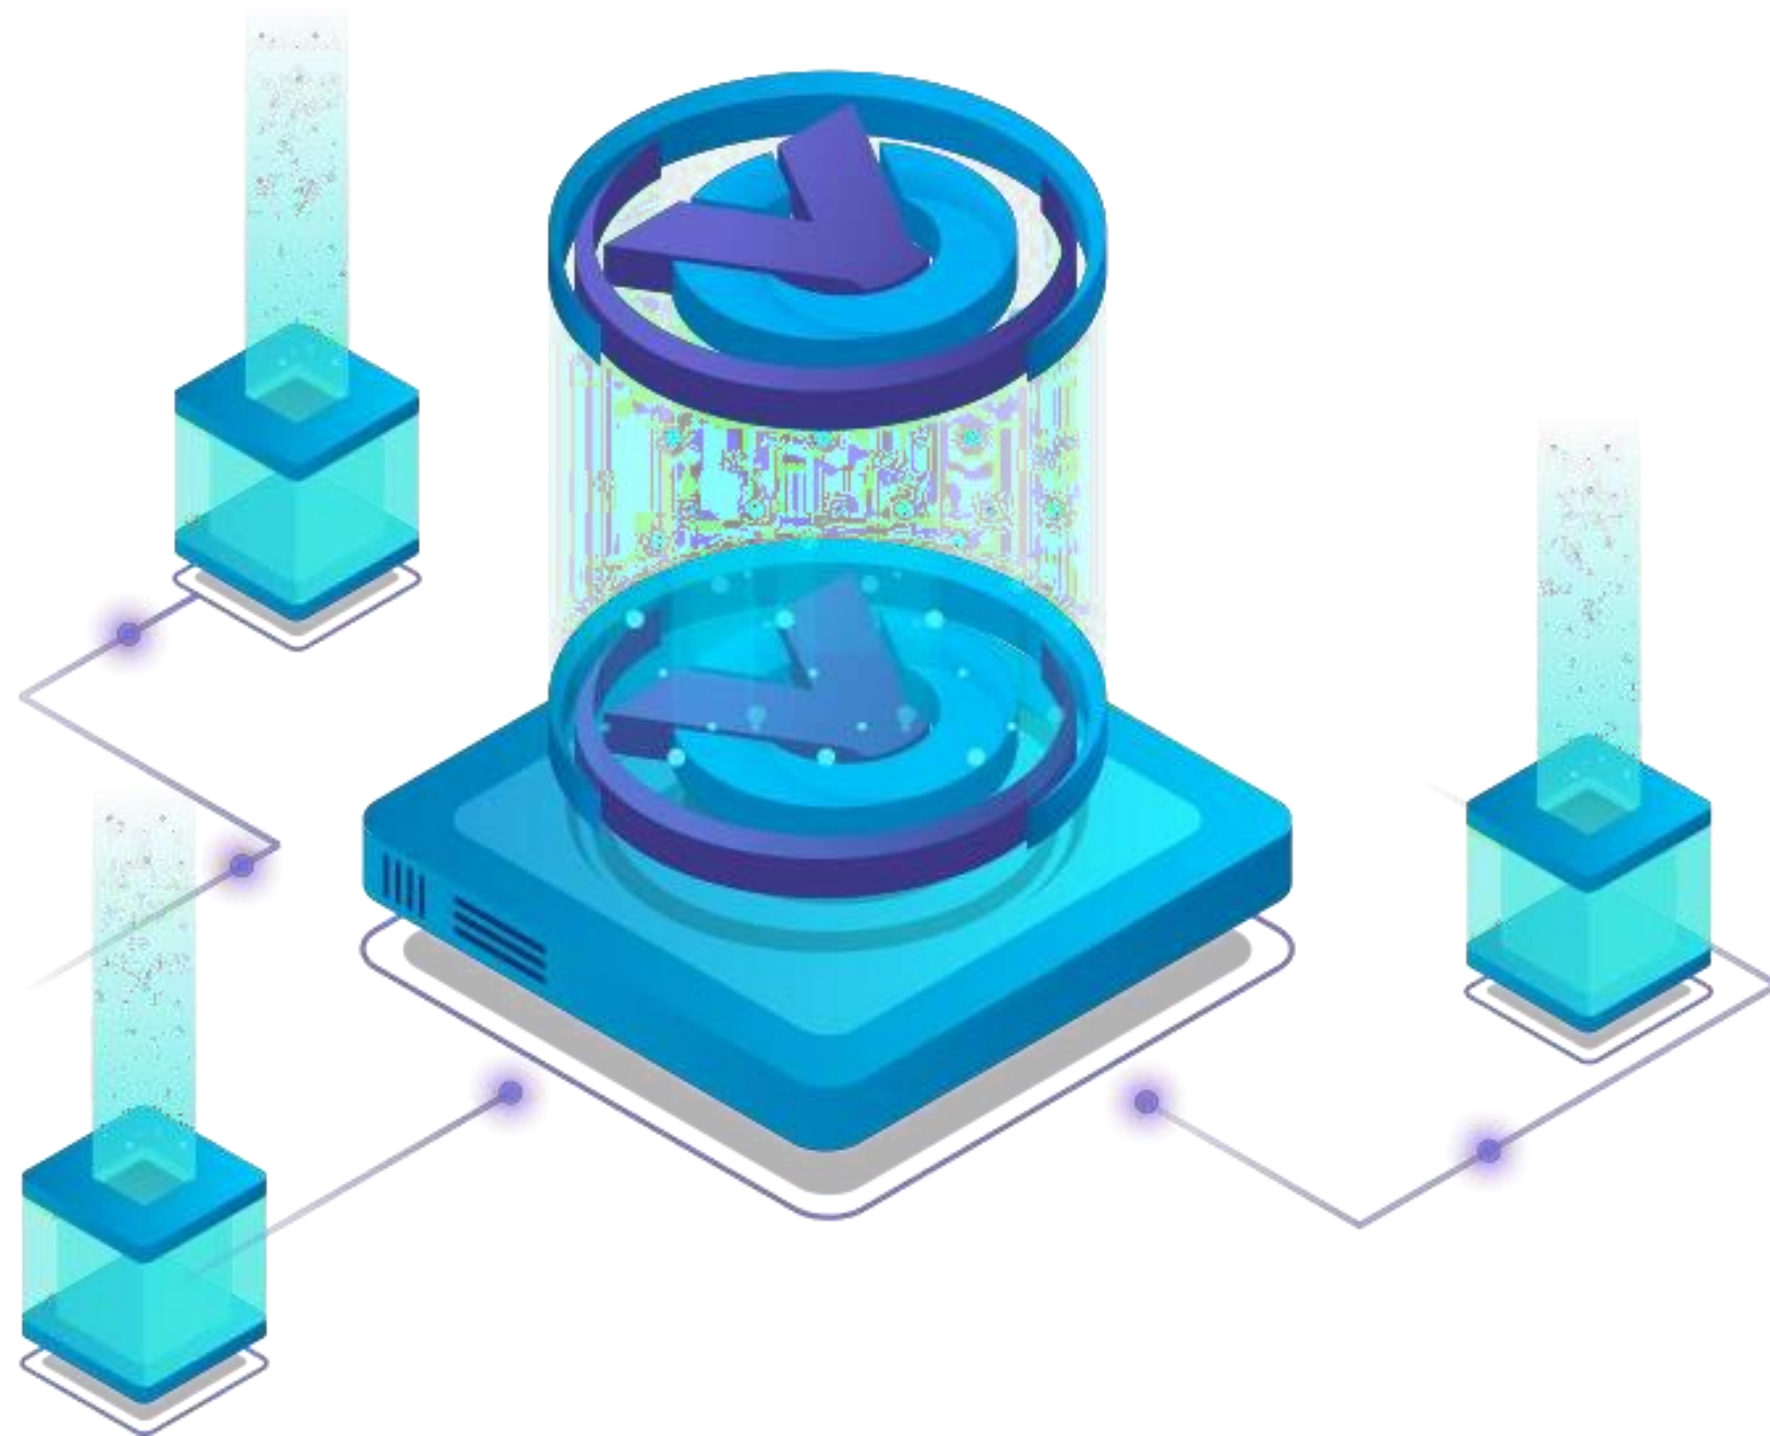

## 3 UNVID

Unvid is video streaming platform similar like youtube, it was very usefull for content creator to pull up their potential.

## 4 ORXCASH

Orxcash is a fully decentralized platform that includes a decentralized browser-based decentralized crypto wallet, decentralized crypto exchanges, and decentralized crypto IEO launch platform .

# 1 OYAAA

OYAAA is a decentralized social media platform based on blockchain, committed to becoming a community oriented whereby blockchain investors, traders, crypto enthusiasts can freely communicate and collaborate with each others, the vision of oyaaa is to allow blockchain investors, crypto communities, project owners align and work together in true spirit of blockchain, sharing same interests with their social network of friends to change the world.

## 2 HIRINGBLOCKS

HIRINGBLOCKS is a platform for freelancers and anyone who loves working on blockchain related issues like writing a technical article, finding bugs in a smart contract, developing integrations, etc. The platform itself is focused open source projects that need help with certain tasks or just want to outsource work to true experts.

It was made to facilitate a member who is seeking a job, and to facilitate some projects or some companies that open their vacancy to recruit new employee.

### 3 UNVID

UNVID is a decentralized video streaming platform, Unvid breaks the barriers between centralized monetization to decentralized methods of monetizing your contents with annoying ads, linking the decentralized system to the centralization system.

It was very usefull for content creator to pull up their potential. Unvid is easy and simple to use, user does not have to upload a video, they can simple imported it from Youtube, only just submit the link of video from Youtube, it will be automatically uploaded to Unvid and can be watched by your viewers.

# 4 ORXCASH

ORXCASH is a fully decentralized platform that includes a decentralized browser-based decentralized cryptocurrency wallet, decentralized cryptocurrency exchanges, and decentralized cryptocurrency IEO launch platform. ORXCASH supporting p2p BTC  $\rightleftharpoons$  ETH and BTC  $\rightleftharpoons$  ERC20 Token swaps via Atomic Swaps, ORXCASH does not store your data, keys or coins. It operates directly on your browser with no software or plugin installations and downloads required.

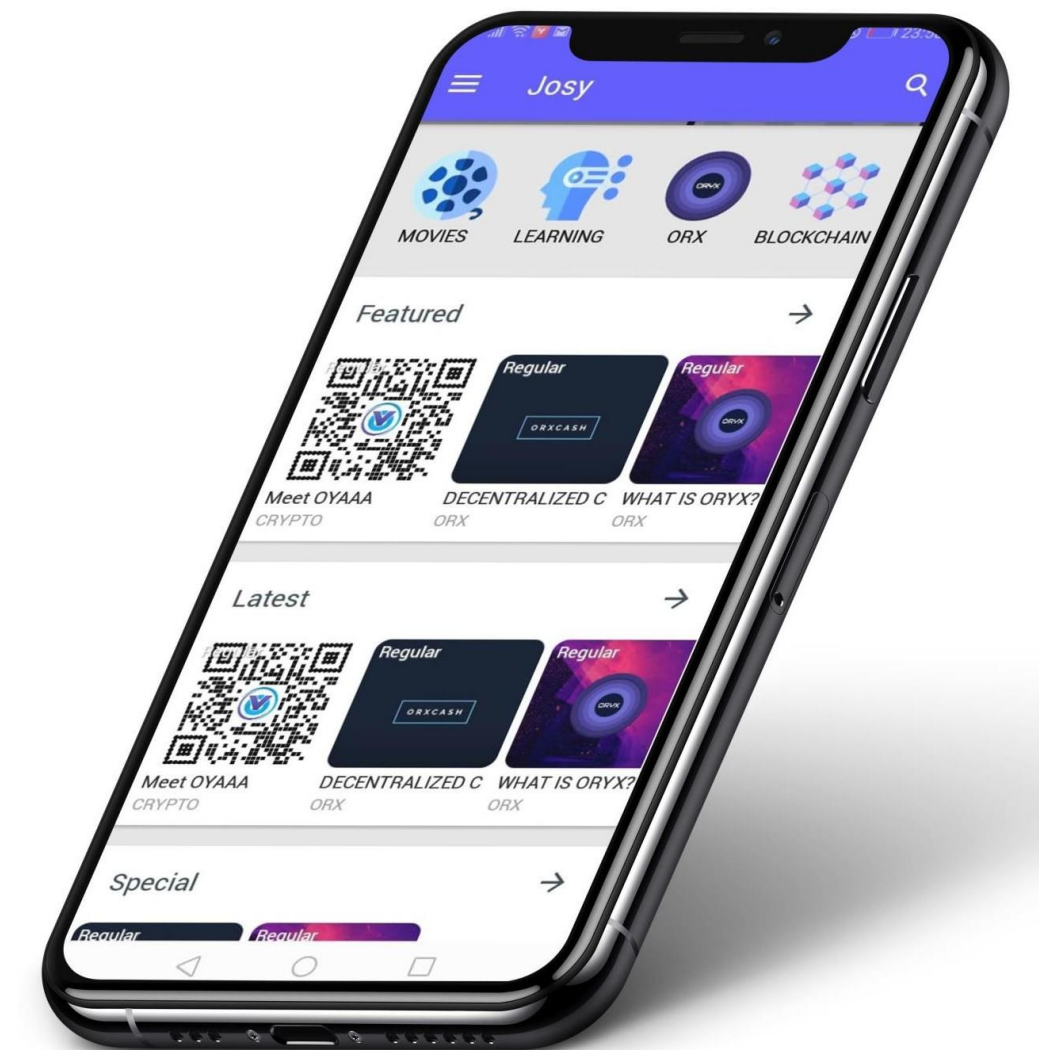

## 5 JOSY APP

JOSY was created to help content creators, projects, influencers and others to get more attention from new members, make it easier to spread information and help to get new followers. JOSY also has uses for its members, which makes it easy for members to get ORX tokens, by working on tasks in JOSY.

Our unique award platform allows us to offer creative and highly effective video advertising solutions. We offer sponsored promotions, email promotions, banner ads, special videos, and more! That's all included in JOSY ads.

# TOKEN DISTRIBUTION

Token sale (ICO/IEO) : 40%

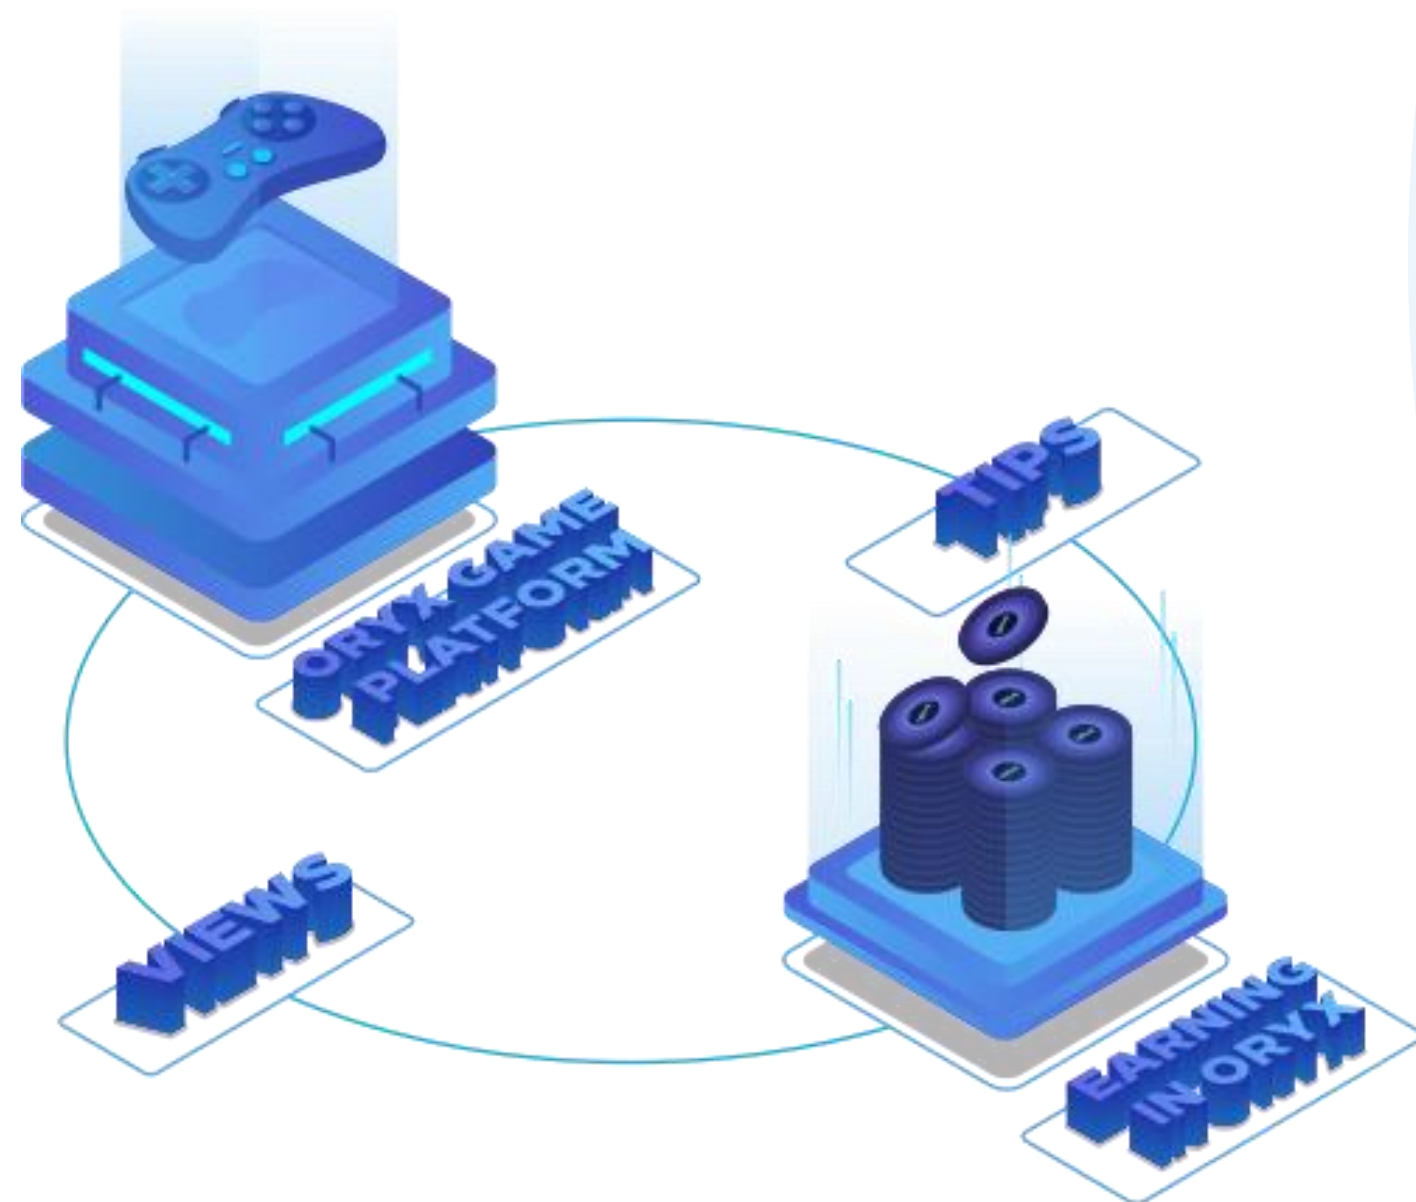

Development : 20%

Marketing : 15%

Team : 20%

Airdrop & reserves : 5%

# TOKEN DETAILS

TOKEN NAME	➔	ORYX
TOKEN SYMBOL	➔	ORX
DECIMAL	➔	0
STANDARD	➔	ERC-20
TOTAL SUPPLY	➔	100,000,000 ORX

CONTRACT ADDRESS

0x888934De736b7F5244F006A655f3BCD71eF0979d

# CONTACT US

If you have any suggestions, ideas, questions, useful skills, please feel free to contact us.

Will benefit the company as it grows into varying fields of operations, we will be most proud when all of us can stand together, with huge smiles on our faces, as we begin to show oryx to the world.

 Together We Achieve More!
